

SENIOR

1. VETERINARY GERIATRIC PREVENTION PLAN

Six-monthly clinical geriatric check-up examinations, with particular attention to: sight, teeth, skin, weight, mobility (osteoarthritis), behavioural alterations.

IF NECESSARY, SPECIAL IN-DEPTH EXAMINATIONS: scaling, urine analysis, blood test, cardiac control, abdominal ultrasound.

2. FOOD PLAN

The digestion of your old friend becomes slower day by day, even if you do not realize it. Over the years, the natural defences decrease, and the whole body functionality loses efficiency. For this reason, it is necessary to use a specific food, which is proper for the “new” age of your dog, in order to preserve its second youth as long as possible.

In **TRAINER® NATURAL SENIOR** you will find easily digestible and available proteins in small percentages, able to improve the digestion and preserve the efficiency of the kidneys and liver. **Less fats and calories will help to preserve the ideal weight of your dog.**

3. FOCUSED ANTI-AGE INTEGRATION

The **TRAINER® NATURAL** line, with the typology of **SENIOR** products, is characterized by an **exclusive mixture of antioxidants**, taken from citrus fruits, which helps your dog receive, in a practical and tasty way, the antioxidants necessary to contrast the excess of free radicals caused by the aging. Moreover, **the integration with nucleotides will help to improve the natural defences** of your dog.

4. DAILY CARE

- Protect it from excessive jumps in temperature, during the summer, as well as, in winter.
- Let it physically exercise every day, with moderation.
- If you notice any change in your pet, immediately speak with your Veterinarian.
- Respect its space and its need for peace.
